

VOLUNTEERS NEEDED

FOR A RESEARCH STUDY ON

A Soft Robotic System for Post-Stroke Hand Rehabilitation (REHAB Glove)

The purpose of this research study is to evaluate a wearable hand rehabilitation system for subjects following a stroke.

Volunteers must:

- **Be 21-80 years old**
- **Be diagnosed with a single, unilateral stroke**
- **Discharged from rehab, chronic 8-16 weeks post stroke**
- **Have arm and hand motor impairments**

All testing is non-invasive. Participants will attend up to 10 visits, with each visit lasting approximately 1.5 – 2 hours. The first and last visits also include standardized clinical testing. The remaining visits involve exercising with the hand rehabilitation system. Compensation will be provided.
